## SRI MEENAKSHI GOVT. ARTS COLLEGE FOR WOMEN (AUTONOMOUS) MADURAI – 625 002.

## **DEPARTMENT OF COMPUTER APPLICATIONS**

## **M.Phil. COMPUTER APPLICATION**

## SYLLABUS INTRODUCED FOR THE ACADEMIC YEAR \$2019-2020\$

OUTCOME BASED EDUCATION

UNDER C.B.C.S.

## SRI MEENAKSHI GOVT ARTS COLLEGE FOR WOMEN (AUTONOMOUS) DEPARTMENT OF COMPUTER APPLICATIONS (Academic year 2019-20 onwards)

## **DEPARMENT NAME: COMPUTER APPLICATIONS**

## **INTRODUCTION**

The Department of Computer Applications blossomed in the year 1998 offering Master of Computer Applications course approved by AICTE. In August 2018 B.C.A course was started. The Department has an enterprising faculty team of 3 Assistant Professors, 2 Guest faculties and 1 Programmer. It has more than 100 research publications to its credit. They contribute their share of knowledge to academic community through Invited Talks and Paper presentations in National / International Conferences. The Department takes continuous efforts in upgrading the course content and enhancing students skills.

## **COURSES OFFERED:**

- **B.C.A**
- M.C.A
- M.Phil. COMPUTER APPLICATIONS

## VISION

Enabling Students to become enterprising Academicians, Young Entrepreneurs and Responsible Citizens.

## MISSION

Imparting Quality Knowledge and Essential Virtues Treading Towards Holistic Development.

## PROGRAMME OUTCOME (PO) of M.Phil.

At the end of the programme, the students will be able to:

PO1: Apply the concepts of computing in various research domains

**PO2:** Use machine learning to resolve environmental issues.

- PO3: Practice professional ethics to accomplish holistic development.
- **PO4:** Enhance the quest for lifelong learning.
- **PO5:** Apply knowledge of Computing, in all the fields of learning including higher research and its extensions.

## Programme Specific Outcome (PSO) of M.Phil.

- **PSO 1**: To pursue qualitative research in the field of computing.
- PSO 2: To assimilate computing ideas in various domains
- PSO 3: To improve research skills and innovations.
- PSO 4: To instill virtues and social responsibility.

## SRI MEENAKSHI GOVT. ARTS COLLEGE FOR WOMEN (AUTONOMOUS) MADURAI – 625 002.

## DEPARTMENT OF COMPUTER APPLICATIONS

## M.Phil. Computer Application Syllabus – OBE-CBCS (For those who are admitted from June 2019 onwards)

	Sub.	Title of the Paper		Marks	Crodita	
	Code	fitte of the Paper	Int.	Ext	Total	Credits
		I - Semester				
Core Paper-1	Paper-1 MPCA1 Research Methodology		40	60	100	5
Core Paper-2	MPCA2	Information Security	40	60	100	5
Elective Papers			40	60	100	5
Option-1	MPCE1	Mobile Communications				
Option-2	MPCE2	Data Mining and Warehousing				
Option-3	Digital Image MPCE3 processing and Machine Vision					
Option-4	MPCE4	4 Grid and Cloud Computing				
II - Semester						
	MPCPW	Dissertation and Viva- voce	25	75	100	21
Total					400	36

## (This syllabus will come into effect from the Academic Year 2019-2020 onwards)

- The programme will consist of two semesters with 36 credits.
- In the First Semester there will be three papers, with 5 credits each.
- a. Research Methodology
- b. Information Security
- c. Elective Course related to the Dissertation Work

## In the Second Semester the students will have to do a dissertation with 21 credits

The last date for the submission of dissertation is on or before 31<sup>st</sup> July. Attendance is compulsory. Fieldwork and library visits pertaining to research can be done with prior permission.

## **Current Assessment for Semester I**

Two Monthly Tests	$: 2 \times 10 = 20$ Marks	
Model Exam	: 1 x 10 = 10 Marks	
Seminar and Assignment	: 10 Marks	
Total	: 40 Marks	

## **Question paper Pattern for Core and Elective Courses :**

Students will answer five essay questions out of 10, in 1200 words each.

Duration of examination	:	3 Hours
Maximum Marks	:	60 Marks

## SRI MEENAKSHI GOVT. ARTS COLLEGE FOR WOMEN (AUTONOMOUS) MADURAI – 625 002.

## Programme : M.Phil.Part III: CoreSemester : IHours : 6 P/W 90 Hrs P/SSub. Code : MPCA1Credits : 5TITLE OF THE PAPER: Research Methodology

#### Peer Teaching GD/VIDOES/TUTORIAL ICT Pedagogy Hours Lecture 6 2 2 1 1 **PREAMBLE:** 1. To impart the thesis writing skills. 2. To improve the problem solving skills. 3. To focus research tools and techniques. **COURSE OUTCOME** Unit Hrs P/S At the end of the Semester, the Students will be able to UNIT 1 CO1: Understand the elements of thesis writing. 1 18 UNIT 2 CO2: Apply the concept of data structures for NP Complete Problems. 2 18 UNIT 3 CO3: Study the principles of formal languages and finite automata. 3 18 UNIT 4 CO4: Acquire the basics of Probability 4 18 UNIT 5 CO5: Design and develop programs using MATLAB and R 5 18

## SYLLABUS

**UNIT I:** Basic Elements: Thesis Elements – Paper Elements – Order of Thesis and Paper Elements – Concluding Remarks – Identification of the Author and His Writing: Author's Name and Affiliation – Joint Authorship of a Paper: Genuine Authorship and Order of Authors. Identification of Writing: Title, Keyboards, synopsis, preface and abstract – Typical Examples. Chapters and Sections: Introductory Chapters and Section – Core Chapters and Sections. Text-Support materials: Figures and Tables – Mathematical Expressions and Equations – References – Appendixes and Annexure – Listing of Materials. Numbering of elements: Pagination – Numbering of Chapters, Sections and Subsections – Numbering of figures and Tables – Equation Numbering – Appendix Numbering – Reference Numbering.

**UNIT II:** Elementary data structures – Greedy method: Knapsack problem – job sequencing with deadlines – Optimal merge patterns. Dynamic Programming: Multistage graphs – Optimal binary search trees – 0/1 Knapsack – Reliability design – The traveling salesman problem – Flow shop scheduling – Basic search and traversal techniques: The Techniques for Code Optimization. Bi-connected components and depth – first search. Backtracking the 8 – Queens problem – Sum of subsets – Hamiltonian cycles – Knapsacks Problem.

**UNIT III:** Formal Languages and Finite Automata: Context free Grammars – Derivation Trees simplification of context free grammars – Chomsky normal forms – Greiback Normal Forms – The Pumping Lemma for

context free Languages.

Finite State systems: Basic Definitions – Non-Deterministic Finite Automata(NFA) – Finite Automata with Epsilon Moves – Regular Expression – Applications of Finite Automata (Stress on theorem statement and problems only)

**UNIT IV: :** Decision Making: Introduction – Baye's Theorem – Multiple Features – Conditionally Independent Features – Decision Boundaries – Unequal Costs of Error – Estimation of Error Rates – The Leaving – One – Out Technique – Characteristic Curves – Estimating the Composition of Populations – Problems – Clustering: Introduction – Hierarchical Clustering – Partitioned Clustering – Problems.

**UNIT V:** Matlab and R Tools

### **TEXT BOOKS:**

- 1. B.N. Basu, "Technical Writing", PHI. Pvt. Ltd., New Delhi, 2007. (chapters : 4,5,6,7 and 8).
- 2. Alfred V. Aho. John E. Hopcroft, Jeffrey D. Ullman," Data Structures and Algorithms, Addison Wesley Publishing Company, 1987.
- 3. Ellis Horowitz Sartaj Sahini. "Fundamentals of Computer Algorithms", Galgotia Publications(P), Ltd., 1993.
- 4. Earl Gose, Richard Johnson Baugh, Steve Jost, "Pattern Recognition and Image Analysis" PHI, 1997. (chapters: 3,5).
- 5. S.N.Sivanantham, S.Sumathi, S.N. Deepa Introduction to Neural Networks using Matlab 6.0, TMH, 2008 (chapters:12.13 15.5).

## SYLLABUS

**UNIT I:** History – What is Information Security – Critical Characteristics of Information, NSTISSC Security Model, Components of an Information System, Securing the Components, Balancing Security and Access. The SDLC The Security SDLC – Need for Security – Business Needs, Threats, Attacks, Legal, Ethical and Professional issues.

**UNIT II:** Introduction: Security Trends – The OSI Security Architecture – Security Attacks – Security Services – Security Mechanisms – A Model for Network Security – Classification Encryption Techniques. Symmetric Cipher Model – Substitution Techniques – Transposition Techniques – Steganography. Block Ciphers and the Data Encryption Standard : Block Cipher Principles – The Data Encryption standard – Advanced Encryption Standard: Evaluation Criteria for AES – The AES Cipher – More on Symmetric Ciphers: Multiple Encryption and Triple DES – Stream Ciphers and RC4 – Public-Key Cryptography and RSA: Principles of Public-Key Cryptosystems - The RSA Algorithm.

**UNIT III:** Key Management: Key Management – Diffie-Hellman Key Exchange- Elliptic Curve Arithmetic – Elliptic Curve Cryptography – Message Authentication and Hash Functions: Authentication. Requirements – Authentication Functions – Message Authentication Codes – Hash Functions – Security of Hash Functions and MACs – Hash and MAC Algorithms: Secure Hash Algorithm – HMAC – CMAC.

**UNIT IV:** Digital Signatures and Authentication Protocols: Digital Signatures – Authentication Protocols – Digital Signature Standard – Authentication Applications: Kerberos – X.509 Authentication Service – Public-Key Infrastructure – Firewalls: Firewall Design Principles – Trusted Systems.

**UNIT V:** Electronic Mail Security: Pretty Good Privacy – IP Security: IP-Security- Overview – IP Security Architecture – Authentication Header – Encapsulating Payload – Combining Security Associations – Key Management – Web Security: Secure Socket Layer and Transport Layer Security – Secure Electronic Transaction.

SYLLABUS									

**UNIT I:** Medium Access Control – Motivation for Specialized MAC – SDMA – FDMA – TDMA – CDMA– Comparison of Access Mechanisms – Tele communications – GSM – DECT – TETRA – UMTS – IMT – 200 – Satellite Systems Basics – Routing – Localization – Handover – Broadcast Systems Overview – Cyclic Repetition of Data – Digital Audio Broadcasting – Digital Video Broadcasting.

**UNIT II:** Wireless LAN Infrared Vs Radio Transmission – Infrastructure Networks – Ad hoc Networks – IEEE 802.11 – HIPERLAN – Bluetooth – Wireless ATM Working Group – Services – Reference Model – Functions – Radio Access Layer – Handover – Location Management – Addressing Mobile Quality of Service – Access Point Control Protocol.

**UNIT III:** Mobile IP Goals – Assumptions and Requirement – Entities – IP Packet Delivery – Agent Advertisement and Discovery – Registration – Tunneling and Encapsulation – Optimization – Reverse Tunneling – IPv6 – DHCP – Ad hoc Networks.

**UNIT IV:** Traditional TCP – Indirect TCP – Snooping TCP – Mobile TCP – Fast Retransmit/ Fast Recovery – Transmission/ Timeout Freezing – Selective Retransmission – Transaction Oriented TCP.

**UNIT V:** Architecture – Datagram Protocol – Transport Layer Security – Transaction Protocol – Session Protocol – Application Environment – Wireless Telephony Application.

## SYLLABUS

**UNIT I:** Introduction: What Is Data Mining? – What Kind of Data can be mined? - What Kind of Patterns can be mined? – Which Technologies are used? – Major Issues in Data Mining. Getting to know your data: Data Objects and Attribute Types – Basic Statistical Description of Data. Data Preprocessing: An Overview – Data Cleaning – Data Integration – Data Reduction – Data Transformation and Data Discretization. Data Warehousing and Online Analytical Processing: Basic Concepts – Data Warehouse Modeling: Data Cube and OLAP - Data Warehouse Implementation – Data Generalization by Attribute-Oriented Induction. Data Cube Technology: Data Cube Computation: Preliminary Concepts – Data Cube Computation Methods.

**UNIT II:** Mining Frequent Patterns, Associations, and Correlations: Basic Concepts and methods: Basic Concepts – Frequent Item set Mining Methods – Which Patterns Are Interesting? – Pattern Evaluation Methods. Advanced Pattern Mining: Pattern Mining: A Road Map – Pattern Mining in Multilevel, Multidimensional Space – Constraint-Based Frequent Pattern Mining.

**UNIT III:** Classification: Basic Concepts – Decision Tree Induction – Bayes Classification Methods – Rule-Based Classification – Model Evaluation and Selection – Techniques to Improve Classification Accuracy. Classification: Advanced Methods: Bayesian Belief Networks – Classification by Back Propagation – Support Vector Machines – Classification Using Frequent Patterns – Lazy Learners (or

Learning From Your Neighbors) – Other Classification Methods – Additional Topics Regarding Classification.

**UNIT IV:** Cluster Analysis: Basic Concepts and Methods: Cluster Analysis – Partioning Methods – Hierarchical Methods – Density-Based Methods – Grid-Based Methods – Evaluation of Clustering. Outlier Detection: Outliers And Outlier Analysis – Outlier Detection Methods – Statistical Approaches – Proximity-Based Approaches – Clustering Based Approaches – Classification Based Approaches.

**UNIT V:** Data Mining Trends and Research Frontiers: Mining complex data types : Mining Sequence data: Time-Series, Symbolic Sequence and Biological Sequences – Mining Graphs and Networks – Mining Other Kinds of Data . Other Methodologies of Data Mining: Statistical Data Mining – Views on Data Mining Foundations – Visual and Audio Data Mining. Data Mining Applications: Data Mining for Financial Data Analysis - Data Mining for Retail and Telecommunication Industries - Data Mining in Science and Engineering - Data Mining for Intrusion Detection and Prevention - Data Mining and Recommender Systems. Data Mining and Society: Ubiquitous and Invisible Data Mining – Privacy, Security, and Social Impacts of Data Mining – Data Mining Trends.

UNIT 5 CO5:	5	18							
				2					

## SYLLABUS

**UNIT I:** Digital Image Processing: Origins of Digital Image Processing, Steps in Digital Image Processing, Digital Image Fundamentals: Elements of Visual Perception, Light and the Electromagnetic Spectrum, Image Sensing and Acquisition, Image Sampling and Quantization, Basic Relationships between Pixels, Mathematical Tools used in Digital Image Processing.

**UNIT II:** Image Transformation & Filters: Basic Intensity Transformation Functions, Histogram Processing, Fundamentals of Spatial Filtering, Smoothing Spatial Filter, Sharpening Spatial Filters, Combining Spatial Enhancement methods, Fuzzy techniques for Intensity Transformation and Spatial Filtering. Filtering in the Frequency Domain: Preliminary Concepts, Sampling and the Fourier Transforms of Sampled Functions, The Discrete Fourier Transform (DFT), Properties of the 2-D DFT, Filtering in the Frequency Domain, Image Smoothing and Sharpening using Frequency Domain Filters, Selective Filtering.

**UNIT III:** Image Restoration, Reconstruction and Image Segmentation: Image Degradation/Restoration process, Noise Models, Restoration in the presence of Noise only-Spatial Filtering, Periodic Noise Reduction by Frequency Domain Filtering, Linear, Position-Invariant Degradations, Estimating the Degradation Functions, Inverse Filtering, Wiener Square Error Filtering, Constrained Least Square Filtering, Geometric Mean Filter, Image Reconstruction from Projections. Image Segmentation: Point, Line and Edge Detection, Thresholding, Region-Based Segmentation, Segmentation Using Morphological Watersheds, Use of Motion in Segmentation.

**UNIT IV:** Color Image Processing: Color Fundamentals, Color Models, Pseudocolor Image Processing, Full Color Image Processing, Color Transformation, Smoothing and Sharpening, Image Segmentation Based on Color, Noise in Color Images. Wavelets and Multiresolution Processing: Multiresolution Expansion, Wavelet Transforms in One Dimension, The Fast Wavelet Transforms, Wavelet Transforms in Two Dimensions, Wavelet Packets. Image Compression: Fundamentals, Basic Compression Methods, Digital Image Watermarking.

**UNIT V:** Morphological Image Processing: Erosion and Dilation, Opening and Closing, The Hit-Or-Miss Transformation, Basic Morphological Algorithms, Gray-Scale Morphology. Object Recognition: Patterns and Pattern Classes, Recognition Based on Decision-Theoretic Methods. Applications of Image Processing, Medical Image Processing, Remote Sensed Image Processing. Machine Vision.

## SYLLABUS

**UNIT I:** Introduction to Grid Computing-Anatomy and Physiology of Grid –Early Grid Activities – Current Grid Activities–Grid Standards -Grid Business Areas–Grid Challenges and Applications-Grid Computing Organization and their roles.

**UNIT II:** Service Oriented Architecture –Web Service Architecture –Grid Architecture – Implementing Grid Architecture-Globus Toolkit –Services -Open Grid Services Architecture –Grid Scheduling and Resource Management–Framework–Grid Resource Management Systems – Principles of Local Schedulers -Grid Scheduling with QoS –Data Management –Grid Security.

**UNIT III:** Cloud Computing –Overview –Applications-Intranets and the Cloud –Companies in the Cloud Today-Cloud Computing Services-On Demand Computing –Discovering Cloud Services-Development Services and Tools.

**UNIT IV:** Cloud hardware and infrastructure-clients-security-network-services-platforms-cloud storage - Cloud software architecture issues-Classification of Cloud Implementations.

UNIT V: Operating System for the Cloud -Application Patterns and Architecture –Case Studies-Cloud

Computing services available under various platforms.
